Development of Health System in India: A Brief Overview of Recommendations of the various Committees Since 1947 To 2015

Author
Madan Mohan Laddunuri*

Abstract
WHO defines ‘public health’ as the science and art of promoting health, preventing disease and prolonging life through the organized efforts of the Society. Public health is a social and political concept aimed at improving health, prolonging life and quality of life among whole populations through health promotion, disease prevention and other forms of health interventions.

According to World Health Organization (WHO), a well-functioning health system working in harmony is fabricated on trained and motivated health workers, a well-maintained infrastructure, and a consistent supply of medicines and technologies, backed by sufficient funding, well-built health plans and evidence-based policies. A health system consists of all organizations, people and actions whose primary goal is to promote, restore or maintain health. The overall health systems objective is to improve population health outcomes in an impartial way without burden people with health care expenditure.

India’s health care system was carefully prepared at the time of Independence (1947) to make available primary, preventive, and curative health care within a reachable distance of the population even in isolated, rural areas. Health care services at the primary, secondary and tertiary level, run mainly by State Governments, afford free or very low cost medical services. Over the past seventy years (since 1947), public health infrastructure and services have undergone significant changes and massive expansion in scale and nature based on recommendations by a number of expert committees.

Keywords: Development, Public Health Systems, Various Committees.

Introduction
WHO defines ‘public health’ as the science and art of promoting health, preventing disease and prolonging life through the organized efforts of the society.1 Public health is a social and political concept aimed at improving health, prolonging life and quality of life among whole populations through health promotion, disease prevention and other forms of health interventions.2

According to World Health Organization (WHO), a well-functioning health system working in harmony is fabricated on trained and motivated health workers, a well-maintained infrastructure, and a consistent supply of medicines and technologies, backed by sufficient funding, well-built health plans and evidence-based policies.3 A health system consists of all organizations, people and actions whose primary goal is to promote, restore or maintain health. The overall health systems objective is to improve population health outcomes in an impartial way without burden people with health care expenditure.4

3. According to World Health Organization (WHO), a well-functioning health system working in harmony is fabricated on trained and motivated health workers, a well-maintained infrastructure, and a consistent supply of medicines and technologies, backed by sufficient funding, well-built health plans and evidence-based policies.
4. A health system consists of all organizations, people and actions whose primary goal is to promote, restore or maintain health.
5. The overall health systems objective is to improve population health outcomes in an impartial way without burden people with health care expenditure.
The development of Health Care system in India

India’s health care system was carefully prepared at the time of Independence (1947) to make available primary, preventive, and curative health care within a reachable distance of the population even in isolated, rural areas. The health care system in India, at present, has a three-tier composition to offer health care services to its people. Health care services at the primary, secondary and tertiary level, run mainly by State Governments, afford free or very low cost medical services.

Since independence, several governments appointed Committees and Commissions examined issues and challenges which health sector is facing. The purpose of these ad-hoc committees formed from time to time is to review the current situation regarding public health status in the country and suggest further course of action in order to accord the best of health care to the people. Over the past seventy years (since 1947), public health infrastructure and services have undergone significant changes and massive expansion in scale and nature based on recommendations by a number of expert committees.

Recommendations of the various committees

The Table 1 below highlights the salient findings and recommendations of the various committees since 1947.

<table>
<thead>

<thead>
<tr>
<th>Year</th>
<th>Committee/Reform</th>
<th>Details</th>
</tr>
</thead>
<tbody>
<tr>
<td>1973</td>
<td>Kartar Singh Committee on Multipurpose Health Workers</td>
<td>The committee recommended the integration of peripheral workers into a single cadre of multipurpose workers. Also it recommended the organizational change with respect to PHCs and SCs - one PHC to be established for every 50,000 population. Each PHC to be divided into 16 SCs each for a population of 3,000–3,500. Each SC to be staffed by a team of one male and one female health worker. The work of 3-4 health workers to be supervised by one Health Assistant.</td>
</tr>
<tr>
<td>1975</td>
<td>Shrivastav Committee on Medical Education and Support health workers</td>
<td>Recommendations of the committee: Creation of groups of par-medical professional and semi-professional health workers from within the community. Establishment of three cadres of health workers between community level workers and doctors at PHC. Development of “Referral Service” by developing connections between the primary health center and higher level referral and service centers like taluka, district, regional and medical college hospitals. Establishment of a Health and medical Education Commission to bring reforms in health and medical education at universities.</td>
</tr>
<tr>
<td>1977</td>
<td>Rural Health Scheme: Village Health Guides scheme</td>
<td>Village Health Guide (VHG) scheme: According to this scheme, the village community selects a volunteer team from the village, predominantly women, who was instructed short term training for the work. VHG links between the community and the Government Health System. Volunteer provides health education and creates knowledge of Maternal and Child Health and Family Welfare Services.</td>
</tr>
<tr>
<td>1978</td>
<td>Alma Ata Declaration: (Health For All by 2000)</td>
<td>Recommendations of Alma Ata Declaration: Primary health care should include education relating to health problems and techniques of identifying, preventing and controlling of them; promotion of nutritional food and safe water supply and basic sanitation; maternal and child health care, family planning; immunization; prevention of local diseases; provision of drugs.</td>
</tr>
<tr>
<td>1983</td>
<td>Mehta Committee regarding Medical Education</td>
<td>The Mehta committee mainly re-evaluated the medical education and discussed specifically about inadequate Health manpower in India. In addition, It also suggested establish, a commission for medical universities and colleges.</td>
</tr>
<tr>
<td>1987</td>
<td>Bajaj Committee on health manpower planning, production and management</td>
<td>The major recommendations Bajaj Committee are: 1.Formulation of national medical education policy. 2. Formulation of national health workers policy. 3.Development of an Educational Commission for Health Sciences with the coordination with UGC. 4.Establishment of health science universities in various states. 5.To develop Vocational courses related to health fields.</td>
</tr>
<tr>
<td>1996</td>
<td>Bajaj Committee on Public Health Systems</td>
<td>The Key recommendations are to review National Health Policy, Establishment of health impact assessment cell, surveillance of polluted areas, uniform public health Act, find out alternative strategy to strengthening of health services and research, joint</td>

</thead>
<tbody>
<tr>
<td>2000</td>
<td>National Population Policy (NPP)</td>
<td>The immediate objective of NPP was to deal with the contraception, health care infrastructure and health staff and to provide basic reproductive and childcare services. It visualizes the development of one-stop integrated and coordinated basic reproductive and child health services delivery at the village level through a partnership of the government with non-governmental organizations.</td>
</tr>
<tr>
<td>2002</td>
<td>Second National Health Policy</td>
<td>The goals set by Second National Health Policy are: Eradication of Polio by 2005, Elimination Kala Azar by 2010, Eradication of Leprosy by 2005, Elimination Lymphatic Filariasis by 2015, Reduction of half of Mortality related to TB, Malaria, other vector and water borne diseases by 2010. Reduction of Infant mortality to 30/100 and maternal mortality ratio to 100 per 100,000 by 2010. Raise the utilization of public health facilities from &lt;20% to &gt;75% by 2010. Increase health expenditure by Government from existing 0.9% GDP to 2% GDP by 2010. Raise share of central grants to 25% of total health spending by 2010. Increase state sector health spending from 5.5% to 7% of budget by 2005.</td>
</tr>
<tr>
<td>2005</td>
<td>National Rural Health Mission (NRHM)</td>
<td>The National Rural Health Mission main objective to provide universal access to equitable, affordable and quality health care to community. Human resource requirement under NRHM has stepped up drastically, in view of renewed commitment to universal coverage. The challenges involved in training, recruitment, placement and motivation of health workers across the country cannot be neglected, if universal coverage is to be attained.</td>
</tr>
<tr>
<td>2015</td>
<td>National Health Policy</td>
<td>The most important goal of the Policy is: The highest level of good health and social-well-being, through a preventive health care in all developmental policies, and universal access to good quality health care services. The major goal of the policy are: Improve health status of the population through proper policy in all sectors and expand preventive, curative, promotive and rehabilitative services provided by the public health sector. Guarantee universal availability and accessibility of free, wide-ranging primary health care services, including, maternal, child, reproductive and adolescent health and communicable and non-communicable diseases in the population. Facilitate universal access to free necessary drugs, diagnostics, emergency ambulance services, and emergency medical and surgical care services in public health facilities, for all sections of the population. Make possible health care systems more effective, rational, safe, affordable and ethical.</td>
</tr>
</tbody>
</table>

**Conclusion**

Since independence, several governments appointed Committees and Commissions examined issues and challenges which health sector is facing. The purpose of these ad hoc committees formed from time to time is to review the current situation regarding public health status in the country and suggest further course of action in order to accord the best of health care to the people.
